

Sound-proof Central Granulator

SG-3650

Refer carefully to this manual before operation.

SG-23/30/36

Coding Principle

SG-3060

Features

Fine finishing cutting chamber and cutting tools that need adjustment

SG-23 series adopts staggered blades, it can decentralize working load when granulating to increase cutting efficiency, Blade retainer is designed for quick blade replacement without readjustment.

SG-30 and SG-36 series adopts paddle blades. It allows increased efficiency and reduced energy consumption.

Staggered Blade (SG-23)

Paddle Blade (SG-30&SG-36)

Automatic conveying device

The machine is equipped with automatic conveying device of regrind materials, which is able to increase the conveying efficiency; materials are conveyed by blowers, which promote airflow and achieve air cooling of the cutting chamber to some extent. Thus, the room temperature of the cutting chamber can be reduced.

Sound-proofing machine
 The machine adopts enclosed soundproof box, and in the parts that may make noises, there are sound-absorbing cotton, which can efficiently reduce the noises made in the cutting process.

• High-efficiency cutting motor

The machine adopts IE3 high-efficiency motor, which has stable performance as well as safe operation and helps energy consumption.

Cooling device of cutting chamber

The cooling water device (equipped SG--30/36) at the back plate of cutting chamber can effectively reduce the temperature of cutting chamber to avoid material blocking.

Presetting Knife Jig

The presetting knife jig, which enables to reshape of the blades and installation without too much cost and time.

 Multiple safety protection of control Control circuit meets CE standard, and it has multiple protections including protection of motor overload, short circuit, phase default and phase order detection, ensuring safe operation of the machine.

Application

SG-23/30/36 series sound-proof central granulators are suitable for centralized recycling of wastes or rejected parts from injection molding, blow molding or extrusion lines. The machines feature optimized structure, easy operation, and quick blades replacement. Staggered rotating blades can easily grab and cut materials. This design makes the machine work more efficiently and can reduce waste of energy to the minimum.

Options Full-receiver Alarm Device

Full-receive alarm device helps to realize unmanned operation and no materials will be wasted. Whenever the regrind level reaches the motor position, the machine will be forced to stop and be cut off via it is sensor, thus stop the granulator and warn the user by sounding an alarm. Applicable to SG-23/30/36/43/50/70. Add "FAD" at the end of the model code.

Feed Hopper with Magnet

Feed hopper with magnet is used to take out metal craps and impurities in the material. Add "FHM" at the end of the model code.

SG-23/30/36

Special Screens

Special screen mesh sizes: Φ4, Φ6, Φ10, Φ12(mm) for SG-23/30 series, Φ8, Φ12, Φ 14, Φ17, Φ25 (mm) for SG-36 series.

Add "SS + screen diameter" at the end of the model code, e.g.: $\Phi6mm$, add "SS06".

Dust Separator

Work with cyclone dust separator to recycle the granule and separate it from dust.

DS-23/30

Material Side Feed Pipe

Feeding Hopper for Conveyor

Material feeding for large granulators is quite a difficult

matter. They are generally installed at a lower place or a

platform must be built for material feeding. Shini particularly designed the belt conveyor to easily convey the material into the cutting chamber of

Add "BCF" at the end of the

SG-36 series.

model code.

The design of feeding hopper of traditional granulators is not suitable for long pipes and section bars. We have designed material side feed pipe for convenient feeding of long materials. It's optional for SG-36. Add "SF" at the end of the model code. DS-36/43/50/70

Dust Separator can separate the dust in the regrind for immediate recycle use. The dust will be kept in filter bag, thus working environment will remain clean. This device ensures full use of regrind to avoid material wasting and enhance the economy returns.

- The function of fiber reinforced material granulating is optional. Adopt surface-hardening treatment on the material contacting component. And blade material is V-4E joint with S50C. Add "F" at the end of the model code;
- Power increased blower enables material conveying in longer distance, at "EC" at the end of the model code.
- For stainless steel made feed hopper cover plate and storage tank, Add " R " at end of the model code.

Notes: 1) " o "stands for optional. 2) SKD11 is steel grade of Japanese JIS standard. 3) Max. capacity of the machine is subject to diameter of screen mesh size and composition of material.

4) Noise level varies with different materials and motor types.

5) To avoid plastic from sticking to the blades, all materials should be crushed at normal temperature. 6) Power supply : 30, 230/400/460/575VAC, 50/60Hz.
